

ABOUT ME

Highly motivated Computer Science Engineering student at VIT Vellore with a proven track record in rapid prototyping and innovation. Second-place winner at INNOHACK '26 for "Vision Stick," an assistive IoT device, and a Devjams ‘25 semi -finalist. Proficient in Embedded C and Python, with a strong focus on developing AI-powered & IoT solutions for real-world challenges.

SKILLS

- ***Languages**: Embedded C (for hardware), Python (for AI/ML), and C++.*
- ***IoT & Robotics:** Microcontroller prototyping (Arduino/ESP32), Sensor Integration, and Actuators.*
- ***AI & Machine Learning:** Computer Vision (OpenCV), Predictive Modeling, and Neural Networks.*
- ***Hardware-Software Integration:** Developing "Edge AI" solutions (running AI models on IoT devices).*
- ***Rapid Prototyping:** Proven ability to build functional MVPs under hackathon constraints (e.g., INNOHACK '26).*

SHAAN AHAMED M

Pursuing Bachelor of Technology (B.Tech.) Computer Science | National Hackathon Runner-up | Transforming Healthcare through Assistive Technology | DSA, AI & Robotics Enthusiast

Self-motivated and strong inclination to exploring, learning and understanding new technologies. Consistently seek opportunities by staying curious and apply theoretical knowledge to real-world challenges. An enthusiastic and active participant in hackathons and coding competitions and deliver tangible impact/outcome and meaningful innovations.

ACHIEVEMENTS

***Award-Winning Innovation:** INNOHACK '26: Secured 2nd Place and a 30k INR prize for the "Vision Stick," an assistive device (software and hardware) designed to empower the visually impaired. This product solidified my commitment to using AI, software and hardware integration for social good.*

***DevJams '25 (by Google Developer Groups):** Shortlisted for the semi-final round in one of VIT’s most prestigious hackathon. It strengthened my ability to build and pitch under high pressure competitive environment.*

***AI-Driven Spatial Reconstruction:** Developed a system that transforms standard 2D video footage into navigable 3D environments. Leveraged Computer Vision and Depth Estimation models to assist individuals with memory loss in re-familiarizing themselves with their surroundings.*

STRENGTHS

- ***Technical Versatility:** Proficient in C/C++ and Python, with deep interest in the intersection of software performance and user experience. Experienced in bridging the gap between hardware (IoT/Sensors) and high-level software (Android).*
- ***Rapid Prototyping:** Proven ability to build a functional MVP (Minimum Viable Product) from scratch under high-pressure hackathon conditions.*
- ***Project Ownership:** Capable of leading a technical product from the initial concept/circuit design through to a winning competition entry.*
- ***Performance Optimization:** Focused on writing efficient code for resource-constrained devices (like ESP32 or Arduino) to ensure real-time responsiveness.*
